

ON!Track Solution Overview

INTRODUCTION

Efficient management of assets is one of the most challenging tasks for any construction company. Where are your assets? For which assets are services or safety inspections due? What is the utilization of your assets?

Hilti ON!Track helps you manage your assets anytime, anywhere. It brings visibility and accountability to your entire fleet of assets, independent on type or manufacturer.

VALUE HIGHLIGHTS

Hilti ON!Track is a solution for the professional management of all construction assets in the field

- Fast and reliable identification of assets
- Transparency on costs, condition, status, location and history of all assets
- Clear accountability for all assets
- Transparency on services and inspections
- Compliance with health and safety regulation
- Flexible reporting for improved decision making
- Reduction of paper-based processes in the warehouse and in the field
- No local software installation or maintenance
- Access to professional support and advice by Hilti specialists

SYSTEM OVERVIEW

TAGS

- To be able to manage your assets efficiently, you should attach a Tag to your assets
- Each Tag comes with a globally unique number, called a "Scan Code"
- In each Tag, the Scan Code is represented by 1) RFID, 2) Barcode, and 3) a Visual Number printed on the Tag
- The Tag can be read with the Scanner and your Smartphone
- Hilti offers different types of Tags which are optimized for different types of assets and environments. Contact Hilti for advice on which types of Tags you need for your assets

SCANNER

- The Scanner is equipped with RFID and Barcode reading capabilities
- The Scanner includes the ON!Track Mobile Client Application
- The Scanner can connect to the Internet via WiFi or the Mobile network

SMARTPHONE

- The ON!Track solution supports Smartphones with Android OS versions >4.0
- You can download the ON!Track Mobile Smartphone Application via Google Play Store.
- The camera of your Smartphone allows the Barcode of the Tags to be read

WEB APPLICATION

- The ON!Track Web Application runs on any computer that is connected to the Internet and equipped with a Web Browser¹
- It offers extensive functionality for managing your assets, in particular
 - Dashboard with key information at a glance
 - Ability to add/edit assets, to view and search for assets, to transfer assets between locations and employees, and to manage services and inspections
 - Ability to manage locations, employees and user roles/permissions
 - Ability to manage templates
 - Ability to generate reports

¹¹ Supported Web Browsers: Internet Explorer Version >=9; Google Chrome Version >=25

MOBILE APPLICATIONS – RFID READER AND SMARTPHONE APPLICATION

- The ON!Track Mobile Applications offer functionality targeted for users in the field, in particular
 - RFID (Scanner only) and Barcode scanning
 - Ability to add assets
 - Ability to transfer and confirm delivery of assets
 - Ability to identify and view assets
 - Check inventory
- The ON!Track Mobile Applications can operate both in online and offline mode; when online, information is synchronized with the Web Application
